

MP-MasterHub

MaxiPark

MP-MasterHub

The MP-MasterHub can get information from up to 9 MaxiPark-Hub and the PC management system. Connections to hub are as in the picture below.

It Takes care of all real time control of to avoid stop time when the server is updated etc.

The Master can support up to 1080 parking slots. If the garage is bigger than 1080 slots then more than one MasterHub is used. This means that there are no limitations in practice.

The master Hub designed with the most reliable PLC technology. This means that the down time is absolutely minimum. Compared to control by a PC the availability is very high. The Master Hub is controlling all information from the Hubs and the parking slots and controls the Main Screen as well as the internal Displays. If (unlikely) the MasterHub fails then this function can be taken over by another Hub.

The standard type is 19" rack mounted. But it is also available in a housing such as MaxiPark-Hub. Master Hub placed in the server/control room.

Takes care of all real time control of real time communication.

It can be delivered in two different versions. The most common is the 19 inch rack version. Connections to hubs are as in the picture below

MP-MasterHubRack

Part no. MP-MasterHubRack
19 Inch rack mounting
